

# CEE 498DS: Data Science for CEE, Fall 2020

**THIS SYLLABUS IS SUBJECT TO CHANGE!** Please check back throughout the course.

## Basic Course Information

---

- Department: Civil and Environmental Engineering
- Title: CEE 498DS: Data Science
- Credits: 3 for Undergraduates, 4 for Graduate Students
- Semester: Fall 2020
- Meeting time and location: 12-1:20 on Tuesdays and Thursdays on [Zoom](#)
- First day of instruction: 8/25/2020
- Last day of instruction: 12/8/2020

## Basic Instructor Information

---

- Instructor: Prof. Christopher Tessum, PhD
- Office: 3213 Newmark Civil Engineering Laboratory
- Office hours: 10:30 am to 12:00 pm on Mondays and Wednesdays on [Zoom](#)
- Email: [ctessum@illinois.edu](mailto:ctessum@illinois.edu)
- Website: <https://cee.illinois.edu/directory/profile/ctessum>
- Names and contact information for teaching assistants: TBD

## Description of the course

---

Welcome to CEE Data Science! This semester, you will learn to leverage data to study civil and environmental engineering problems, identify patterns, and make actionable insights. This course combines training in digital and computer tools—including distributed computing, exploratory data analysis, and statistical modeling and deep learning—with application of those tools to civil and environmental engineering issues.

This course differs from other available machine learning and data science courses in that it focuses on civil and environmental engineering problems and the methods used to solve them. In particular, this course emphasizes working with spatial data, which is common in physical science but less common in data science when applied to other disciplines.

By the end of the semester, you will be able to:

1. Use software tools for data processing and visualization, machine learning, and deep learning to
2. Retrieve, manipulate, and analyze data; and
3. Make inferences and predictions about the (built) environment.

This course will help you to gain the skills and tools necessary to make the most of the great increases in the amount and quality of data related to civil and environmental engineering that is being collected and stored.

Because data science methods are used across a number of different industries and instructional materials are readily available, this course will include readings and video lectures from across the internet. We will focus our face-to-face time on learning aspects of civil and environmental data science that differ from data science as used by other fields, and on applying data science concepts to solving physical problems. This course will be structured around semester-long projects; students will

choose project topics at the beginning of the semester and will apply the concepts learned in the class to their projects as the semester progresses.

## Prerequisites

---

- CEE 202;
- CEE300, 330 or 360; and
- CS 101 or equivalent.

## Course Structure

---

This course is structured as a series of modules, with each module containing recorded lectures, readings, and quizzes to be completed before each class meeting. Class meetings will be held on Zoom to go into further depth on the material that was covered in recorded lectures and readings. Near the beginning of the semester, students will choose a topic for a project, which they will work on throughout the semester, applying the concepts that we learn in class. Additionally, students will complete homework assignments and a midterm and final exam.

## Course Requirements and Assessment Overview

---

- Grades will be assigned based on several types of deliverables:
  - Discussions: 3% of final grade
  - Homeworks: 17% of final grade
  - Midterm exam: 15% of final grade
  - Final exam: 25% of final grade
  - Course project: 40% of final grade: 5% for literature review, 15% for Kaggle competition, 2.5% for midterm presentation, 7.5% for final presentation, and 10% for final report.
- Graduate students are expected to register for 4 credits and undergraduates are expected to register for 3 credits. Correspondingly, course projects for graduate students are expected to include a machine learning component that is more complex than linear regression, whereas for undergraduates this is optional.
- Letter grades will be assigned according to the following scale:
  - 97-100: A+
  - 94-96.5: A
  - 90-93.5: A-
  - 87-89.5: B+
  - 84-86.5: B
  - 80-83.5: B-
  - 77-79.5: C+
  - 74-76.5: C
  - 70-73.5: C-
  - 67-69.5: D+
  - 64-66.5: D
  - 60-63.5: D-
  - Below 59.5: F

## Homeworks and Exams

---

Homeworks and Exams will be done through [PrairieLearn](#). In assigning these types of homeworks and exams, I'm placing emphasis on **mastery**. The idea is to keep doing questions until you master the underlying concept or method. Once you do, you should be able to answer these questions very quickly.

Before doing the assessments, you will need to enroll in this class in PrairieLearn. To do so, go to <https://prairielearn.engr.illinois.edu/pl/enroll> and click on “Add course” next to “CEE 498DS: Data Science for Civil and Environmental Engineering, Fall 2020”.

**Important:** When you log in to PrairieLearn, choose “Log in with Illinois” rather than “Log in with Google” or “Log in with Microsoft”. The UIUC login is the only one that will work.

## Homeworks

For the homeworks, I try to preparation for class before a module starts, so if you finish all of the questions completely before the first meeting time for the module, you will receive 110% of the available points. Questions finished between the first and second meeting times of the module receive 100%, and questions finished up to two weeks after the module ends can receive 80%.

Note that new homeworks are assigned most weeks, so if you don't stay ahead, it can be easy to fall behind.

## Exams

Exams are also administered using PrairieLearn. For exams, partial credit isn't given, but you can try each problem more than once, with a decreasing number of points possible for each try.

## Learning Resources

---

- Students are expected to bring have use of a laptop for class.
- There is no required textbook to purchase. Course material will draw from a number of sources across the internet.
- Some supplemental textbooks which students may find useful are:
  - Python for Data Analysis: Data Wrangling with Pandas, NumPy, and IPython
  - Hands-On Machine Learning with Scikit-Learn & TensorFlow

## Policies

### Inclusive Environment

The effectiveness of this course is dependent upon the creation of an encouraging and safe classroom environment. Exclusionary, offensive or harmful speech (such as racism, sexism, homophobia, transphobia, etc.) will not be tolerated and in some cases subject to University harassment procedures. We are all responsible for creating a positive and safe environment that allows all students equal respect and comfort. I expect each of you to help establish and maintain an environment where you and your peers can contribute without fear of ridicule or intolerant or offensive language.

If you witness or experience racism, discrimination, micro-aggressions, or other offensive behavior, you are encouraged to bring this to the attention of the course director if you feel comfortable. You can also report these behaviors to the Bias Assessment and Response Team (BART) (<https://bart.illinois.edu/>). Based on your report, BART members will follow up and reach out to students to make sure they have the support they need to be healthy and safe. If the reported behavior also violates university policy, staff in the Office for Student Conflict Resolution may respond as well and will take appropriate action.

### Accommodations

To obtain disability-related academic adjustments and/or auxiliary aids, students should contact both the instructor and the Disability Resources and Educational Services (DRES) as soon as possible. You can contact DRES at 1207 S. Oak Street, Champaign, (217) 333-1970, or via email at [disability@illinois.edu](mailto:disability@illinois.edu).

## **Participation**

Active participation in the online learning environment is vital to your success in this course. Depending on your course, you may be asked to engage in online discussions and other interactive learning environments that invite your active participation and involvement with other students and your instructor.

## **Student Commitment**

By registering for this online course, you commit to self-motivated study, participation in online course activities, and timely submission of all assignments. Furthermore, you commit to accessing the course website and checking email at least four days per week (daily for 4-week courses), as well as to devoting at least 6–8 hrs./week (16-week course), 12–16 hrs./week (8-week course), or 24–32 hrs./week (4-week course) to preparing for each module and completing the required assignments and readings.

## **Deadlines**

If you are unable to meet a particular deadline, it is your responsibility to make prior arrangements with the instructor for that given week. Otherwise, work submitted later than 1 day late will receive 10% penalty, and work submitted later than 2 days late will not be considered for grading unless consent has been given by the instructor.

## **Instructor Responses**

### **Instructor Feedback Turnaround Time**

Questions posted to the [Course Help Discussion Forum](#) generally will be answered within 48 hours. If possible, students are encouraged to answer questions posted by other students to the [Course Help Discussion Forum](#), rather than waiting for an instructor's response.

Assignments submitted online will be reviewed and graded by the course instructor within 5 business days. Exams, essays, and term papers will be graded within 10 business days. If your instructor is unable to meet this timeline, students will be notified.

### **Contacting the instructor**

For the fastest response response, the best way to contact the instructor is by attending office hours or posting questions to the [Course Help Discussion Forum](#).

The instructor will not respond to phone calls. The instructor will respond to email messages within 48 hours of receiving them unless the instructor notifies you ahead of time of an inability to do so. When sending email, include a subject line that identifies the course number and nature of your question. The instructor may not respond to questions sent to him or her that should be posted in the [Course Help Discussion Forum](#). Please don't be offended if you are asked to forward your question to this location.

### **Responding to the Discussion Forums**

The role of the instructor within the discussion forums is to help facilitate discussion by providing probing questions, asking for clarification, and helping solve conflicts as necessary. The instructor will not respond to every post. You are encouraged to share your thoughts, experiences, and ideas with each other as well.

## **Academic Integrity**

Academic dishonesty will not be tolerated. Examples of academic dishonesty include the following:

- Cheating
- Fabrication
- Facilitating infractions of academic integrity
- Plagiarism
- Bribes, favors, and threats
- Academic interference
- Examination by proxy
- Grade tampering
- Non-original works
- Should an incident arise in which a student is thought to have violated academic integrity, the student will be processed under the disciplinary policy set forth in the Illinois Academic Integrity Policy. If you do not understand relevant definitions of academic infractions, contact your instructor for an explanation within the first week of class.

Giving and receiving advice on projects and homework assignments is acceptable and encouraged. However, it is expected that help be given in general terms and in the form of natural language sentences (for example, English) rather than in the form of mathematical equations, algorithms, computer code, or anything else that could be copied and pasted into the recipient's answer. Similarly, students are encouraged to consult the Internet, but copying and pasting code from the Internet and submitting it for the class is not acceptable. The work that each student submits is expected to be their own, written with their own hand or typed on their own keyboard.

## **Copyright**

### **Student Content**

Participants in University of Illinois courses retain copyright of all assignments and posts they complete; however, all materials may be used for educational purposes within the given course. In group projects, only the portion of the work completed by a particular individual is copyrighted by that individual. The University of Illinois may request that students' materials be shared with future courses, but such sharing will only be done with the students' consent. The information that students submit during a course may, however, be used for the purposes of administrative data collection and research. No personal information is retained without the students' consent.

### **Non-student Content**

Everything on this site and within University of Illinois courses is copyrighted. The copyrights of all non-student work are owned by the University of Illinois Board of Trustees, except in approved cases where the original creator retains copyright of the material. Copyrights to external links are owned by or are the responsibility of those external sites. Students are free to view and print material from this site so long as

- The material is used for informational purposes only.
- The material is used for noncommercial purposes only.
- Copies of any material include the respective copyright notice.

- These materials may not be mirrored or reproduced on non-University of Illinois websites without the express written permission of the University of Illinois Board of Trustees. To request permission, please contact the academic unit for the program.

## **Student Behavior**

### **Student Conduct**

Students are expected to behave in accordance with the penal and civil statutes of all applicable local, state, and federal governments, with the rules and regulations of the Board of Regents, and with university regulations and administrative rules.

For more information about the student code and handbook, see the CITL course policies page.

### **Netiquette**

In any social interaction, certain rules of etiquette are expected and contribute to more enjoyable and productive communication. The following are tips for interacting online via email or discussion board messages, adapted from guidelines originally compiled by Chuq Von Rospach and Gene Spafford (1995):

- Remember that the person receiving your message is someone like you, deserving and appreciating courtesy and respect.
- Be brief; succinct, thoughtful messages have the greatest effect.
- Your messages reflect on you personally; take time to make sure that you are proud of their form and content.
- Use descriptive subject headings in your emails.
- Think about your audience and the relevance of your messages.
- Be careful when you use humor and sarcasm; absent the voice inflections and body language that aid face-to-face communication, internet messages are easy to misinterpret.
- When making follow-up comments, summarize the parts of the message to which you are responding.
- Avoid repeating what has already been said; needless repetition is ineffective communication.
- Cite appropriate references whenever using someone else's ideas, thoughts, or words.

## **Communications**

### **Daily Contact**

Your daily contact should be via the discussion forums in our Learning Management System and via email.

### **Course Questions**

Questions pertaining to the course should be posted in our [Course Help Discussion Forum](#). You can get to this forum from the course home page. Posting questions here allows everyone to benefit from the answers. If you have a question, someone else is probably wondering the same thing. Anyone submitting a question via email will be directed to resubmit the question to the [Course Help Discussion Forum](#). Also, participants should not hesitate to answer questions posed by peers if they know the answers and the instructor has not yet responded. This not only expedites the process but also encourages peer interaction and support.

### **Personal and Grade-Related Questions**

Questions of a personal nature should first be sent to the instructor's email address (listed on the Instructor Information page). When sending email, include a subject that identifies the course number and nature of your question.

### **Emergencies**

If you have an emergency that will keep you from participating in the course, please notify your instructor by using the instructor's email address (listed on the Instructor Information page). Provide callback information in your email (if necessary). You should also notify your program director of any emergencies.

### **Zoom**

Zoom is a tool that allows multiple people to join together simultaneously via a computer to text chat, audio chat, video chat, collaborate on a digital whiteboard, and even share their computer desktops with one another. The instructor's Virtual Office (when available) makes use of Zoom.

### **Instructor's Virtual Office**

Another way to communicate with the instructor is to make use of the Virtual Office hours through the Zoom Interface. The instructor will be available for office hours via Zoom on the dates and during the times listed on the Virtual Office page in the Syllabus.

### **Announcements**

The Announcements forum serves as a way for your instructor and University of Illinois administrators to make announcements within our online learning environment. Announcements posted here will also be sent to your Illinois email address, so be sure to check your email or the Announcements forum at least once a day to see whether any new announcements have been made.

### **Sexual Misconduct Policy and Reporting**

The University of Illinois is committed to combating sexual misconduct. Faculty and staff members are required to report any instances of sexual misconduct to the university's Title IX and Disability Office. In turn, an individual with the Title IX and Disability Office will provide information about rights and options, including accommodations, support services, the campus disciplinary process, and law enforcement options.

A list of the designated university employees who, as counselors, confidential advisors, and medical professionals, do not have this reporting responsibility and can maintain confidentiality, can be found in the Confidential Resources section. Other information about resources and reporting is available at [wecare.illinois.edu](http://wecare.illinois.edu).

### **Student Wellness Resources**

The University of Illinois strives to promote student success through the support of student psychological and emotional well-being. Please take advantage of the resources listed on the Student Affairs website.

### **Schedule**

## Exams

- Midterm Exam: Thu 10/15/2020, 12:00 CDT—Fri 10/16/2020, 12:00 CDT
- Final Exam: Fri 12/11/2020, 13:30 CST—Fri 12/11/2020, 16:30 CST

# Modules

---

## Module 1: Open Reproducible Science

### Module 1 Overview

This module covers tools and methods for ensuring your work is correct, understandable, and reproducible.

### Module 1 Learning Objectives

By the end of this module, you should be able to:

- List the Bash commands for doing different computer operations
- Describe how to organize data files to improve transparency and reproducibility
- Define the syntax for the Markdown text formatting language
- List the Git and GitHub commands and operations for performing different operations

### Module 1 Readings and Lectures

Develop your answers to the discussion questions below while completing the readings and lectures.

- [Introduction to Earth Data Science Chapter 1](#)
- [Introduction to Earth Data Science Chapter 2](#)
- [Introduction to Earth Data Science Chapter 3](#)
- [Andrej Karpathy: Software 2.0](#)
- [NOVA: What Makes Science True?](#)

### Module 1 Discussion

This module includes a discussion section to help you understand by articulating how the module content could be useful in your professional life. Consider the following questions:

- What does it mean to practice open and reproducible science, and how could you apply it to your academic or professional life?
- Although the readings and NOVA video mainly refer to academic science, how could they be relevant to science practiced in industry?
- For the “Software 2.0” essay: What is the author talking about? Instead of trying to understand every detail in the essay (although by the end of the semester you should be able to understand a lot of it), focus on the main message: What is Software 2.0 and what are its implications for how science is carried out?

Log in to the [module discussion forum](#) and make one initial post and two responses. Refer to the [Discussion Forum Instructions and Rubric](#) for instructions how to compose posts to the discussion forum, and how they will be graded.

**The initial post for this module are due by Thu 8/27/2020, 12:00 CDT and all response posts are due by Tue 9/1/2020, 12:00 CDT.**

### Module 1 Homework

The homework for Module 1 covers the required readings and lectures and is available [here](#). General information about homework assignments is [here](#).

**The homework for this module is due by Thu 8/27/2020, 12:00 CDT for 110% credit, by Tue 9/1/2020, 12:00 CDT for 100% credit, and by Thu 9/10/2020, 12:00 CDT for 80% credit.**

## **Module 1 Topics for Zoom Meetings**

- Introduction, syllabus, and getting to know one another ([slides](#))
- Discussion of readings and technology check: installing Python and related tools ([notes](#))

## **Module 2: Data science topics for Civil and Environmental Engineering**

### **Module 2 Overview**

In this module we will learn the types of Civil and Environmental Engineering problems that data science and machine learning can help to answer, and begin to think about topics for course projects.

### **Module 2 Learning Objectives**

By the end of this module, you should be able to:

- interpret how data science can be used in support of CEE
- formulate a data science problem statement
- describe a strategy for solving the problem

### **Module 2 Readings and Lectures**

Develop your answers to the discussion questions below while completing the readings and lectures.

- [Deep Learning State of the Art \(This is an introduction to what is currently possible with data science\)](#)
- [Tackling Climate Change with Machine Learning](#)
- [Kaggle data science competitions](#)
- [Earth Engine Case Studies](#)
- [OpenAQ.org](#)
- [CACES air quality data](#)
- [EIA Energy Data](#)
- [UCI Machine Learning Datasets](#)
- [Dataset for defect detection in Concrete](#)
- [Best Datasets for Machine Learning Data Science](#)
- [VisualData Dataset Discovery](#)

### **Module 2 Discussion**

This module includes a discussion section to help you understand by articulating how the module content could be useful in your professional life. Consider the following questions:

- A big part of this course will be a semester-long project, where you will use a dataset to answer a question relevant to Civil or Environmental Engineering. What are some ideas you have for course projects, how are they related to Civil or Environmental Engineering, why do you think they would be useful, and what dataset would they be based on?

Log in to the [module discussion forum](#) and make one initial post and two responses. Refer to the [Discussion Forum Instructions and Rubric](#) for instructions how to compose posts to the discussion forum, and how they will be graded.

**The initial post for this module are due by Tue 9/1/2020, 12:00 CDT and all response posts are due by Thu 9/3/2020, 12:00 CDT.**

## **Module 2 Topics for Zoom Meetings**

- Project introduction, brainstorming, and proposals (slides)  
[<https://docs.google.com/presentation/d/1MjCv3tA5FBN5Pu2rU670q1lk-aeQ1qmYR2vg8ai7j8/edit?usp=sharing>]
- Group discussion regarding project topics

## **Module 3: Programming review**

### **Module 3 Overview**

This course makes extensive use of the Python programming language. By brushing up on our Python skills now, we will make the rest of the course easier.

### **Module 3 Learning Objectives**

By the end of this module, you should be able to:

- Express abstract concepts using Python syntax
- Solve mathematical problems using Python

### **Module 3 Readings and Lectures**

- Complete the tutorials at <https://learnpython.org>, including those under 'Learn the Basics', 'Data Science Tutorials', and 'Advanced Tutorials'. These readings may not include all the information you need to complete the homework, which will allow you to practice researching concepts on the internet.

### **Module 3 Homework**

The homework for Module 3 covers the required readings and lectures and is available [here](#). General information about homework assignments is [here](#).

**The homework for this module is due by Tue 9/8/2020, 12:00 CDT for 110% credit, by Thu 9/10/2020, 12:00 CDT for 100% credit, and by Tue 9/22/2020, 12:00 CDT for 80% credit.**

### **Module 3 Topics for Zoom Meetings**

- Practice exercises and Q&A. [Practice exercises](#)
- 

### **Module 3 Project Assignment**

Project literature review

## **Module 4: Data**

### **Module 4 Overview**

Data relevant to Civil and Environmental Engineering comes in a number of different formats, including:

- Tabular data (csv, excel): Rows represent observations, columns represent properties
- Raster/image data ([geotiff](#), [NetCDF](#), png, jpg)
- graph data ([dot](#), [gtfs](#))

## Module 4 Learning Objectives

By the end of this module, you should be able to:

- Specify information as tabular, raster, and graph data
- Use software tools to load and manipulate tabular, raster, and graph data

## Module 4 Readings and Lectures

- [tabular data](#)
- [Pandas for tabular data](#)
- [graph data structure](#)
- [graph properties](#)

## Module 4 Homework

The homework for Module 4 covers the required readings and lectures and is available [here](#). General information about homework assignments is [here](#).

**The homework for this module is due by Tue 9/15/2020, 12:00 CDT for 110% credit, by Thu 9/17/2020, 12:00 CDT for 100% credit, and by Tue 9/29/2020, 12:00 CDT for 80% credit.**

## Module 4 Topics for Zoom Meetings

- Practice and Discussion
- 

## Module 5: Exploratory data analysis (EDA)

### Module 5 Overview

The first step in a data science project is getting a feel for the dataset you are working with. This is called Exploratory Data Analysis (EDA).

### Module 5 Learning Objectives

By the end of this module, you should be able to:

Students will learn how to explore and process an unfamiliar dataset.

### Module 5 Readings and Lectures

- Watch mlcourse.ai video lectures on [exploratory data analysis](#) and [visualization](#)
- Work through accompanying notebooks [1](#), [2.1](#) and [2.2](#)

### Module 5 Topics for Zoom Meetings

- Lecture: Statistics review

- EDA group exercises

## **Module 5 Project Assignment**

Project exploratory data analysis

## **Module 6: Spatial data**

### **Module 6 Overview**

Spatial and Geospatial data are common in Civil and Environmental Engineering, but less common in other disciplines that use data science. In this module we will learn how to work with these types of data.

### **Module 6 Learning Objectives**

By the end of this module, you should be able to:

Students will learn about processing spatial data, which is common in physical data science

### **Module 6 Readings and Lectures**

- Recorded lecture on raster vs. vector formats
- Recorded lecture on joins and boolean operations
- [geopandas tutorial](#)

### **Module 6 Homework**

The homework for Module 6 covers the required readings and lectures and is available [here](#). General information about homework assignments is [here](#).

**The homework for this module is due by Tue 9/29/2020, 12:00 CDT for 110% credit, by Thu 10/1/2020, 12:00 CDT for 100% credit, and by Tue 10/13/2020, 12:00 CDT for 80% credit.**

### **Module 6 Topics for Zoom Meetings**

- 
- 

## **Module 7: Spatial statistics**

### **Module 7 Learning Objectives**

By the end of this module, you should be able to:

Students will learn how to perform statistical analysis of spatial data.

### **Module 7 Readings and Lectures**

- Recorded Lecture: Spatial statistics (spatial autocorrelation, Modifiable areal unit problem, kriging)
- [PySAL library](#) and [notebooks](#)

### **Module 7 Topics for Zoom Meetings**

-

- 

## **Module 8: Project EDA Due**

### **Module 8 Learning Objectives**

By the end of this module, you should be able to:

Students should be able to access, characterize, and visualize the data for their projects by this point.

### **Module 8 Topics for Zoom Meetings**

- 
- 

### **Module 8 Project Assignment**

Project Kaggle Competition

## **Module 9: Supervised learning**

### **Module 9 Learning Objectives**

By the end of this module, you should be able to:

Students will learn what supervised machine learning is and how it can help solve Civil and Environmental Engineering problems.

### **Module 9 Readings and Lectures**

- [framing machine learning](#)
- [gradient descent](#)
- [optimization](#)
- [tensorflow](#)
- [generalization](#)
- [training and testing](#)
- [validation](#)

### **Module 9 Homework**

The homework for Module 9 covers the required readings and lectures and is available [here](#). General information about homework assignments is [here](#).

**The homework for this module is due by Tue 10/20/2020, 12:00 CDT for 110% credit, by Thu 10/22/2020, 12:00 CDT for 100% credit, and by Tue 11/3/2020, 12:00 CST for 80% credit.**

### **Module 9 Topics for Zoom Meetings**

- 
- 

## **Module 10: Unsupervised learning**

### **Module 10 Learning Objectives**

By the end of this module, you should be able to:

Students will learn about basic unsupervised learning algorithms and how they can be used on Civil and Environmental Engineering applications.

### **Module 10 Readings and Lectures**

- [unsupervised learning](#)
- [clustering](#)
- [mlcourse.ai workbook](#)

### **Module 10 Homework**

The homework for Module 10 covers the required readings and lectures and is available [here](#). General information about homework assignments is [here](#).

**The homework for this module is due by Tue 10/27/2020, 12:00 CDT for 110% credit, by Thu 10/29/2020, 12:00 CDT for 100% credit, and by Tue 11/10/2020, 12:00 CST for 80% credit.**

### **Module 10 Topics for Zoom Meetings**

- In class, we will work through some applications to environmental data and discuss how supervised learning can be applied to student projects.
- 

## **Module 11: Neural Networks**

### **Module 11 Learning Objectives**

By the end of this module, you should be able to:

Students will learn about deep learning, the opportunities and drawbacks it presents, and applications to environmental problems.

### **Module 11 Readings and Lectures**

- [Introduction to Neural Networks](#)
- [Multi-Class Neural Networks](#)
- Recorded Lecture: hyperparameter optimization and inductive biases

### **Module 11 Homework**

The homework for Module 11 covers the required readings and lectures and is available [here](#). General information about homework assignments is [here](#).

**The homework for this module is due by Tue 11/3/2020, 12:00 CST for 110% credit, by Thu 11/5/2020, 12:00 CST for 100% credit, and by Tue 11/17/2020, 12:00 CST for 80% credit.**

### **Module 11 Topics for Zoom Meetings**

- Remember to vote!
- 

## **Module 12: Convolutional Neural Networks**

## Module 12 Learning Objectives

By the end of this module, you should be able to:

Students will learn about deep learning, the opportunities and drawbacks it presents, and applications to environmental problems.

## Module 12 Readings and Lectures

- [Introduction to Neural Networks](#)
- [Multi-Class Neural Networks](#)
- Recorded Lecture: hyperparameter optimization and inductive biases

## Module 12 Homework

The homework for Module 12 covers the required readings and lectures and is available [here](#). General information about homework assignments is [here](#).

**The homework for this module is due by Tue 11/10/2020, 12:00 CST for 110% credit, by Thu 11/12/2020, 12:00 CST for 100% credit, and by Tue 11/24/2020, 12:00 CST for 80% credit.**

## Module 12 Topics for Zoom Meetings

- 
- 

## Module 12 Project Assignment

Project Final Presentation and Report

## Module 13: Neural Networks for Sequences

### Module 13 Learning Objectives

By the end of this module, you should be able to:

Students will learn about deep learning, the opportunities and drawbacks it presents, and applications to environmental problems.

## Module 13 Readings and Lectures

- [Introduction to Neural Networks](#)
- [Multi-Class Neural Networks](#)
- Recorded Lecture: hyperparameter optimization and inductive biases

## Module 13 Homework

The homework for Module 13 covers the required readings and lectures and is available [here](#). General information about homework assignments is [here](#).

**The homework for this module is due by Tue 11/17/2020, 12:00 CST for 110% credit, by Thu 11/19/2020, 12:00 CST for 100% credit, and by Tue 12/1/2020, 12:00 CST for 80% credit.**

## Module 13 Topics for Zoom Meetings

- 
- 

## Module 14: Project work

### Module 14 Overview

Students will work on their course projects

### Module 14 Topics for Zoom Meetings

- 
- 

## Module 15: Final exam; final project presentations and reports

### Module 15 Learning Objectives

By the end of this module, you should be able to:

Students should have completed a project where they access and explore a civil or environmental dataset and use it to answer a scientific question.

### Module 15 Topics for Zoom Meetings

- 
-

## Assessment Instructions and Rubrics

---

### Discussion Forum Instructions and Rubric

This section describes how to participate in the discussion forum, and how your posts will be graded.

#### Initial Post

In the Discussion Forum for the module, compose an initial post that responds to at least one of the questions above. Your initial post is your opportunity to engage with the prompt in a way that is unique to you. Some ways to accomplish that include:

- Connect with the prompt in a personal way by incorporating personal anecdotes.
- Reflect on any potential biases you may have based on your experiences.
- Consider any potential biases in the information presented in the prompt itself. Be open to different points of view by providing some suggestions of what those might be.

Your initial post must meet the following requirements:

- Include at least **200 words**, excluding any references.
- Use appropriate evidence from the readings and lessons to support your claims and judgments.

#### Response Posts

Post at least 2 responses in the same thread. Your replies should stimulate more in-depth discussion about the topic. Some ways to accomplish that include:

- Clarify and/or extend your peers' line of thinking.
- Compare/contrast their views on the topic with your own.
- Suggest/question what explanation(s) you think your peers might be missing that could strengthen their arguments.
- End your response with a question to further the dialogue.

Your response posts should meet the following requirements:

- Include at least **50 words**, excluding references.
- Use of appropriate evidence from the readings and lessons to support your claims and judgments.

### Submission Directions

- Access the discussion board and begin a new thread.
- Response Post: Select the title of any post to review it and read any replies already submitted. Click Reply next to any post to compose a reply.

### Evaluation

This activity is worth 40 points: 20 points for your initial post and 10 points for each response post. Please see the rubric below for detailed information about how your posts will be graded.

#### Discussion Forum Rubric

Contributions	Description	Initial Post Points Assigned	Response Points Assigned
Provocative	Response goes beyond simply answering the prompt; attempts to stimulate further thought & discussion	20	10
Substantial	Response provides most of the content required by the prompt, but does not require further analysis of the subject	15	7.5
Superficial	Response provides obvious information without further analysis of the concept; lacks depth of knowledge or reasoning	10	5

Contributions	Description	Initial Post Points Assigned	Response Points Assigned
Incorrect	Response does not accurately address the prompt; rambling and/or without consistency	5	2.5
None	No response provided to the prompt within the associated timeframe	0	0

## Course Project

This course includes a semester-long project, where you will apply the skills we learn in this class to apply data science to a problem relevant to Civil or Environmental Engineering. Project topics will be selected from a combination of student-proposed topics and topics selected by the instructor. The projects will include some individual components and some team components, with teams comprised of all the students assigned to each topic. The project will include a literature review, an exploratory data analysis midterm presentation, a kaggle competition, and a final report and presentation.

### Project literature review

By the time this literature review is completed, students should be able to:

- Identify previous examples of work related to a given project,
- Describe what previous studies did, and
- Critique the previous studies, describing strengths and weaknesses.

Working as a team, students will identify prior work related to the project topic from sources including peer-reviewed literature and [ArXiv](#) (and other ArXiv-like repositories such as [EarthArXiv](#)). Students will then divide the relevant articles among themselves, and individually write literature review of their portion of the articles. (If the literature search does not yield at least 2 articles per person, all team members will independently review the same articles.) Instructions about how to write a literature review are available [here](#), for example.

Students will be evaluated as a group on whether their literature review includes all of the relevant literature, and they will be evaluated individually on the quality of their review.

### Literature review rubric

	Exceptional (100%)	Satisfactory (85%)	Needs work (70%)	Incomplete (<60%)	
Completeness (5 pts)	Includes all relevant literature	Includes most relevant literature, but missing one or two important studies	Missing more than two important studies	Missing most or all key studies	

	<b>Exceptional (100%)</b>	<b>Satisfactory (85%)</b>	<b>Needs work (70%)</b>	<b>Incomplete (&lt;60%)</b>	
Description (10 pts)	Clearly describes the important aspects of each study methods and results	Description is clear but not complete, or complete but not clear	Description is missing key aspects of study methodology and results	Description missing majority of important aspects	
Critique (10 pts)	Clearly compares the studies to each other and discusses their individual and collective strengths and weaknesses in meeting the goal of the student's project	Critique is clear but not complete, or complete but not clear	Critique misses important strengths and weaknesses, either individually or collectively	Critique does not accurately describe strengths and weaknesses	

## Project exploratory data analysis

After completing this exploratory data analysis, students should be able to:

- Interpret a dataset in the context of using it to answer a question
- Select and implement statistical and graphical tools for describing a dataset
- Describe and defend reasons for choosing specific tools
- Analyze visual and statistical results to draw conclusions about the dataset

Each project will include a scientific question to be answered, a dataset relevant to the question, and a machine-learning method used to answer the question using the dataset. The second deliverable for the project is an exploratory data analysis (EDA) of the dataset your project which uses visualizations and statistics to summarize the main characteristics of the dataset.

The EDA should be done by students individually (not as groups) as a *private* notebook in the [Kaggle](#) data science platform. See [here](#) for an example EDA. The EDA notebook should read like a narrative, with natural language descriptions, code, statistics, and visualizations all interspersed with each other.

After the students complete and submit their EDA, they should make their notebook public and leave comments and suggestions on the EDA's of their teammates working on the same project. The comments and suggestions will be graded as a class discussion initial post (for example, needing to be at least 200 words), using the class discussion rubric above.

## Exploratory data analysis rubric

	<b>Exceptional (100%)</b>	<b>Satisfactory (85%)</b>	<b>Needs work (70%)</b>	<b>Incomplete (&lt;60%)</b>	
Technical content (20 pts)	Statistical and visual representations of the data thoroughly characterize all aspects of the data relevant to the project	Representations of the data characterize almost all relevant aspects of the data	Representations are present but not thorough	The dataset is not well described	

	<b>Exceptional (100%)</b>	<b>Satisfactory (85%)</b>	<b>Needs work (70%)</b>	<b>Incomplete (&lt;60%)</b>	
Graphical representation (10 pts)	Uses best practices for graphical display in all cases	Graphics mostly follow best practices, with some exceptions	Graphics are interpretable but do not follow best practices	Graphics are not interpretable	
Documentation (10 pts)	The document has a narrative flow, interspersing a well written introduction, method description including reasons for choosing the methods used, and discussion amidst the code and results	The document has a narrative flow but writing is not completely clear or some aspects are missing	Some documentation is included but it is not thorough	Documentation is not included	

## Project Kaggle competition

After completing this competition, students should be able to:

- Choose a machine learning algorithm appropriate for a given dataset and question
- Implement and train the algorithm to a high degree of accuracy while avoiding overfitting
- Interpret the model results and performance

The class projects will be set up as Kaggle competitions, open only to members of this class. After completing their exploratory data analyses, students will make their notebooks private again. Working individually, they will choose an algorithm and use it to answer the class question. Students should extend the documentation narrative from their EDA to cover methods, results, and discussion for their learning algorithm. [Here is an example](#) of a combined EDA and model prediction. Only some of the project dataset will be made available for training the model on; the rest will be held separately to test the model results. Students will be able to see how their model performance compares to that of the other students in their project team.

At the end of the project period, the student with the highest score in the competition gets an automatic 100% grade on this project component, and the remaining students are graded based on the rubric below. (If there is a tie for first place, all students are graded based on the rubric.)

### Kaggle competition rubric

	<b>Exceptional (100%)</b>	<b>Satisfactory (85%)</b>	<b>Needs work (70%)</b>	<b>Incomplete (&lt;60%)</b>	
Algorithm (20 pts)	A best-in-class algorithm is chosen and implemented correctly	An appropriate algorithm is chosen and implemented correctly	An appropriate algorithm is chosen but not implemented correctly	An inappropriate algorithm is used	

	<b>Exceptional (100%)</b>	<b>Satisfactory (85%)</b>	<b>Needs work (70%)</b>	<b>Incomplete (&lt;60%)</b>	
Training (20 pts)	The algorithm is tuned to maximize predictive accuracy while avoiding overfitting	The algorithm is trained correctly but slightly underfits or overfits	There is substantial over- or under-fitting	The algorithm does not fit the data	
Documentation (10 pts)	Documentation is thorough, clear, and well-written	There are minor issues with thoroughness, clarity, or writing	There are substantial documentation problems	Documentation doesn't exist or isn't readable	

## Project final presentation and report

After completing this presentation and report, students should be able to:

- Collaborate in a team to author a report and presentation
- Evaluate and defend their choice of machine learning methods

After the competition ends, students within each project team will collaborate to produce a final report and presentation that synthesizes the best aspects of all the individual analyses. Reports should include Introduction, Methods, Results, and Discussion sections, and should be long enough to thoroughly cover all of those topics. Because at this point the course projects are already implemented as narrative documents, they should be relatively straightforward to convert to a report.

Reports are **required** to be prepared using the [Manubot](#) manuscript preparation system, which is an alternative to MS Word. This may seem cruel and unusual, but there are two reasons:

1. Manubot makes extensive use of Markdown, Git, and Github, so using it reinforces the skills we are learning in class, and
2. Github has a mechanism for [tracking contributions](#), which allows the instructor to grade project members according to their level of contribution.

The presentation should cover the material in the report and be 10–12 minutes in length. One person or multiple people can present. The presentation will be stopped at 12 minutes regardless of whether it's finished.

## Final presentation and report rubric

	<b>Exceptional (100%)</b>	<b>Satisfactory (85%)</b>	<b>Needs work (70%)</b>	<b>Incomplete (&lt;60%)</b>	
Writing (10 pts)	All required sections are present, well organized, and clearly written	There are minor defects in organization or clarity	There are substantial defects in organization or clarity	Not all required sections are present or interpretable	
Graphical representation (10 pts)	Uses best practices for graphical display in all cases	Graphics mostly follow best practices, with some exceptions	Graphics are interpretable but do not follow best practices	Graphics are not interpretable	

	<b>Exceptional (100%)</b>	<b>Satisfactory (85%)</b>	<b>Needs work (70%)</b>	<b>Incomplete (&lt;60%)</b>	
Oral presentation (5 pts)	Presentation is well organized, complete, and succinct	Minor issues with clarity, organization, or rambling	Poor organization or significantly too long	Presentation is not given	

### **Participation multiplier**

The overall presentation and report grade will be multiplied by the following percent, determined by activity on github and in presentation:

- 1.0: Among the most active contributors to the project
- 0.85: Substantially lower contribution than the most active members
- 0.7: No apparent contribution
- 0.0: Statement from all team members that member did not contribute at all.

### **MS Word multiplier**

Teams not using Manubot will have their presentation and report score multiplied by 0.9.
